

# black heat

## Nature is calling

Black Heat is a premium biochar made from forest and agricultural residues, through a controlled pyrolysis process. More than just an energy source, it's a commitment to sustainability and the future of our planet. Perfect for both home and professional use, it offers a healthier, more efficient, and environmentally friendly barbecue experience.

Black Heat is designed for domestic users — barbecue lovers — as well as professionals in the restaurant and grilling industry.

Clean energy  
for a tastier  
barbecue

## Eco-Friendly & Circular

Made from renewable biomass	Helps reduce deforestation
High purity and efficiency	Low environmental impact: no greenhouse gas emissions

### Advantages of Black Heat

- ✓ Lights up quickly
- ✓ Clean and long-lasting burn
- ✓ Consistent temperature
- ✓ Less ash and smoke = healthier grilling
- ✓ More grilled food with less smoke

# 100% plant-based Biochar

## Easy & Safe to Use

1. Set up your grill on a clean, flat surface.
2. Arrange the biochar in a pyramid shape.
3. Place a firelighter in the centre and light it.
4. Wait about 10 minutes until the flames die out.
5. Spread the embers evenly and enjoy a healthier, tastier barbecue!

## Safety Precautions

Never use indoors or near dry grass or vegetation

Avoid using alcohol, gasoline or other flammable liquids to light the fire

Store safely, out of reach of children

Do not smoke while handling the product

Ingestion is dangerous and must be avoided

Store in a dry place, away from heat sources, flames or sparks

The eco-friendly alternative  
to traditional charcoal.
